FABRICATION TO CUSTOMER DRAWINGS

Steel Component Capabilities

Use these member groups to organise your drawing package. Dimensions, material grades, finishes and inspection requirements are agreed for the actual order.

Welded H-section Steel Columns

Built-up H-sections for factory frames, with plate and connection geometry fabricated to your drawings.

Include: Section depth, flange and web plates, column length and stiffeners. Base plates, end plates, brackets and beam connections.

Welded Box Columns

Square and rectangular built-up columns for industrial frames and other project-specific steelwork.

Include: Plate arrangement, diaphragms and access required by the fabrication details. Column splices, brackets, base plates and adjoining beam details.

Built-up Lattice Columns

Multi-part columns with connecting lacing or plates, including heavy industrial building applications.

Include: Column branches, lacing, connection plates and overall geometry. Crane-support details, column bases and transport assembly divisions.

Site erection photograph

Circular Steel Tube Columns

Round tube columns with welded brackets and connection details for structural frames.

Include: Outside diameter, wall thickness, length and specified material. Column caps, base plates, brackets, splices and beam interfaces.

Cruciform Steel Columns

Cross-shaped steel columns fabricated for multi-directional structural connections.

Include: Plate layout, section dimensions and the required column length. Intersecting beam levels, stiffeners, splice details and connection plates.

Welded Steel Roof Beams

Roof framing members with the section profile, stiffeners and connections defined by your project.

Include: Straight or tapered geometry, plate dimensions and roof-frame arrangement. Haunches, end plates, purlin connections and transport splices.

Steel Component Capabilities

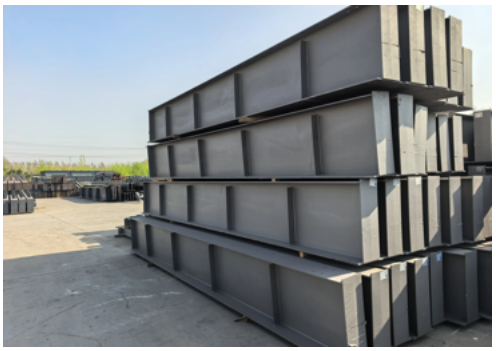

Use these member groups to organise your drawing package. Dimensions, material grades, finishes and inspection requirements are agreed for the actual order.

Welded Steel Platform Beams

Fabricated H-section beams for platforms and frames, coordinated with the supporting columns.

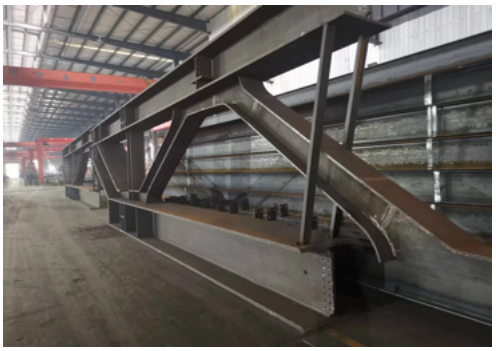

Include: Member schedules, beam levels and the supporting frame connections. Stiffeners, web openings and secondary member interfaces in the drawings.

Steel Crane Runway Beams

Fabricated runway beams for crane-equipped industrial buildings and production facilities.

Include: Crane supplier requirements, support layout and approved member geometry. Rail attachments, end connections, stiffeners and adjoining steelwork.

Fabricated Steel Trusses

Chord-and-web assemblies for roof structures and other long-span steelwork packages.

Include: Overall form, chord and web members, nodes and support details. Fabrication segments, trial assembly requirements and transport connections.
